Energy Solutions for the Future

Quelle: www.wbcsd.org

Renewable energy sources and energy efficiency are the main themes regarding energy supply in the future. Attempts are being made in various studies and realisation orientated projects to reduce the dependency on fossil fuels.

Studies

denkstatt conducts studies with the aim of being able to also implement the results. For example: The establishment of energy services platforms

Advising Investors

denkstatt offers its investors advice on which decisions to reach and in which area development should be fostered: for example the feasibility study for the European Bank for Reconstruction and Development (EBRD) on the topic of block credit for energy efficiency in various Eastern European countries.

Performance

denkstatt supports the implementation of projects which are pushing for alternative energy supplies. E.g. „Energy self-sufficiency in the Upper Ennstal region“.
