Mobility Management for Companies

## Mobility Management for Companies

Transport is one of the sectors with the highest increases of CO<sub>2</sub>- emissions in Austria. Companies who are interested in changing over to alternative fuels (natural gas, bio diesel, vegetable oils, etc.) can now claim support benefits. At the same time the number of petrol stations offering organic fuels is on the increase. Automobile manufacturers also offer a line of alternative models, so that making the changeover has become an interesting prospect.

## Performance

We support companies in the selection of suitable tailor-made changeover measures for their own fleet of vehicles by:

- Selecting suitable models
- Co-operating with relevant petrol stations
- Converting company fuelling stations
- Pay back period calculations

The aim is to achieve amortization in the shortest time possible as well as to adapt the selected solution to the existing fleet.

## References

- The Viennese Economic Chamber - Survey about the need for alternative mobility for Viennese businesses
- Consultation and implementation of emissions trade for various Austrian businesses
- Various studies carried out on this theme for the Austrian Federal Economic Chamber, Federation of Austrian Industry, Federal Ministry of Economics and Labour, etc.

## Support

The consultation can be financed to a large extent by regional sponsorship. The condition set for receiving funding is in the most cases the realisation of the planned measures. The incentive for the company is therefore to choose a solution which is viable and practical and the fastest to implement.
